

# MRC 2021

## Tooling and Infrastructure

Bob Hendrikx

Eindhoven University of Technology  
Department of Mechanical Engineering

April 21, 2021

# The Assignment

**Final Competition:** Bring items to cabinets in a dynamic hospital environment, of which a map is provided

- ▶ Goal:
  - ▶ visit an unknown number of cabinets *as fast as possible*
- ▶ You can use:
  - ▶ The **Laser Range Finder** to detect walls and doors
  - ▶ The **encoder** data from the wheels
  - ▶ ~~The control effort signal to notice touches~~
- ▶ Important Dates:
  - ▶ Final Presentations: **June 2**
  - ▶ Competition Day: **June 9**

# Intermediate Assignment

**Escape Room Competition:** let a robot escape the room through the door.

- ▶ Goal:
  - ▶ try to be *as fast as possible*
- ▶ You can use:
  - ▶ The **Laser Range Finder** to detect walls
  - ▶ The **encoder** data from the wheels
  - ▶ The ~~control effort signal to notice touches~~
- ▶ Competition day: **May 12**

# Simple, right?

Don't worry, we supply you with some tools to get you started!

# Introducing the Robot: PICO

- ▶ Unfortunately we cannot use it!
- ▶ Telepresence Robot from Aldebaran
  - ▶ Robot type: *Jazz*
- ▶ Sensors:
  - ▶ Laser Range Finder (LRF)
  - ▶ Wheel encoders (odometry)
  - ▶ 170° wide-angle camera
- ▶ Actuators:
  - ▶ Holonomic base (omni-wheels)
  - ▶ Pan-tilt unit for head
- ▶ Computer:
  - ▶ Intel I7
  - ▶ Running *Ubuntu 16.04*

# ROS

- ▶ Robot Operating System
  - ▶ Open-source meta-operating system for robots
- ▶ Won't be using it!
- ▶ Instead, we will provide our own 'software layer'
  - ▶ It is simpler to understand, and 'cleaner' to use
- ▶ However, you are still **allowed** to use ROS!

# Ubuntu

Development of PICO's software will be done in Ubuntu.

- ▶ [Linux](#)-based operating system
- ▶ Use version **18.04** (16.04 and 20.04 are at own risk)
- ▶ 32- and 64-bit ([64-bit recommended](#))
- ▶ Easy dual boot installation with e.g., Windows
- ▶ Download: [see tutorial!](#)
  - ▶ Any problems? → [Check the wiki.](#)
  - ▶ No info? → Send us an email.

# C++

- ▶ We will use C++ as programming language
- ▶ C++ is object-oriented C
  - ▶ “C with Classes”
  - ▶ Encapsulate data and functionality within objects
- ▶ It is a **powerful** but **complex** programming language.
- ▶ However, we provide you the **MRC framework** to get you started

# Creating code: Qt Creator

- ▶ Integrated Development Environment
  - ▶ Advanced code editor
- ▶ Many advantages over 'simple editors':
  - ▶ Syntax highlighting
  - ▶ Code completion
  - ▶ Visual compiler feedback
  - ▶ Static code checking
  - ▶ Refactoring tools
  - ▶ Parenthesis matching
  - ▶ ...
- ▶ Or your own favorite editor that supports CMake..

# Git Version Control

- ▶ Version Control System:
  - ▶ *'Manages files and directories, and the changes made to them, over time'*
- ▶ Used to **store** and maintain your code on the server
  - ▶ (Like Dropbox)
- ▶ Maintains **version history**
- ▶ Is **distributed**
  - ▶ You always have the full history on your pc
  - ▶ You can always go back to a version, show differences, even when **off-line**
- ▶ More info on the Wiki

# PICO Simulator

- ▶ The **simulator** will be used to replace the real robot.
- ▶ **PICO Simulator:**
  - ▶ Simulates:
    - ▶ Sensors (Laser, odometry)
    - ▶ Actuators (Base)
    - ▶ Environment (walls, objects)
  - ▶ Can easily create test environments using **height maps**
  - ▶ **Integrates** well with our provided software
    - ▶ If your software runs in the simulator, it runs on the robot

# PICO Simulator

# Example

- ▶ **Full Example:** from requirements, through Task-Skill-Motion to Software Executable.
- ▶ (far) from perfect!
- ▶ Focus on decoupling parts of functionality, explicitly in the code.

Tutorial lectures will introduce robotics concepts in more detail!

# Wiki

- ▶ MRC Wiki:
  - ▶ [http://cstwiki.wtb.tue.nl/index.php?title=Mobile\\_Robot\\_Control](http://cstwiki.wtb.tue.nl/index.php?title=Mobile_Robot_Control)
  - ▶ Info on practical assignment, installation, getting started
  - ▶ Log-in: [student account](#)
- ▶ Group pages on EMC Wiki:
  - ▶ Each group gets its own page
  - ▶ [Update at least weekly](#)
- ▶ Overall use:
  - ▶ Everyone can [edit](#)
  - ▶ If you see a mistake: [correct it](#)

# Working together

Because working together face-to-face is not possible:

- ▶ We recommend using [Microsoft Teams](#) within your group
- ▶ Meet with your tutor once every week using video call
- ▶ Use [canvas](#) for asking general MRC questions to tutors and fellow students
- ▶ Use [canvas](#) for FAQ about problems (e.g. dual boot issues)
- ▶ If you had a problem and know how to fix it: [add it](#)
- ▶ Use [canvas](#) to discuss the video lectures

# Recap

- ▶ Robot: [Simulator only](#)
- ▶ OS: [Ubuntu 18.04](#)
- ▶ Programming language: [C++](#)
- ▶ Code editor: [Qt Creator](#)
- ▶ Version control: [git](#)
- ▶ Documentation: [Wiki](#)
- ▶ meetings: [Microsoft Teams](#)
- ▶ General questions and discussion: [Canvas](#)

That should get you started!

# Groups

Each group will be supervised by a tutor:

- |                         |                     |
|-------------------------|---------------------|
| 1. Manuel Munoz Sanchez | 7. Peter van Dooren |
| 2. Peter van Dooren     | 8. Jordy Senden     |
| 3. Jordy Senden         | 9. ..               |
| 4. Hao Liang Chen       | 10. ..              |
| 5. Bob Hendrikx         | 11. ..              |
| 6. Manuel Munoz Sanchez | 12. ..              |

It is *your* responsibility to get in touch with your tutor (see Wiki)

## *What should I do now?*

- ▶ Make your own groups of **max. 6 people**
  - ▶ By adding your name and contact info to one of the groups on the wiki
  - ▶ Send an email to your group members to get in touch
- ▶ Send an email to your tutor as a group:
  - ▶ to schedule the first meeting,
  - ▶ with one username for access to your Git, (tutorial)
- ▶ Check the Wiki & Finish the Tutorials:
  - ▶ `http://cstwiki.wtb.tue.nl/index.php?title=Mobile\_Robot\_Control`
